## **ENVIRONMENTAL POLICY**

### **POLICY STATEMENT**

Abbott & Co (Newark) Limited is committed to building pressure vessels and air receivers using sound environmental practice and to plan and update its practices in response to advances in technology and new understanding in environmental science.

### **ENVIRONMENTAL PRINCIPLES**

The company is committed to continual improvement on environmental issues where economically feasible.

We will minimise the production of waste where possible and any disposal of waste produced will be carried out with due care for the environment.

We will ensure that the transport of raw materials and products is carried out in the most environmentally responsible way. Our vehicles will be made as fuel-efficient as possible and their routings will try to avoid environmental impacts on local residents.

The steel used in manufacturing pressure vessels and air receivers is largely recycled, as is any offcut material. We will try to minimise the use of new products where other recycled materials are a suitable substitute.

Where waste materials or products can be recycled we will make every effort to ensure that they are recycled in an environmentally responsible way in order to conserve resources.

We will try to minimise the use of energy sources in the organisation, including the use of resource energy when conducting site operations.

We will compile and keep publicly available this Company Environmental Policy.

We will ensure that our operations comply with current legislation and other relevant requirements.

We will be a responsible employer and neighbour.

We will ensure that all employees manufacturing pressure vessels and air receivers here carry out their duties in line with the above statement and, through training, are aware of their obligations.

Signed.....

v W

Managing Director of Abbott & Co. (Newark) Ltd
